

Affiliates / DTG entities

Entity	Location
Decos Software Engineering B.V.	Netherlands
Doclogic B.V.	Netherlands
CenterOne Group B.V.	Netherlands
Decos Information Solution S.L.	Spain
ZiuZ Forensics & Digital Investigation B.V.	Netherlands
Seneca B.V.	Netherlands
Decos Systems B.V. (GeoJunxion)	Netherlands

All sub-processors included in this list are entities that are part of the Decos Technology Group (DTG). Within this group structure, the entities can act as sub-processors among themselves, depending on the nature of the services and internal cooperation. For this reason, these entities are not individually stated in the tables of the sub-processors paragraph.

As all entities are covered by the same management system, they are bound by a uniform information security policy and comply with the same standards and procedures in terms of data protection and compliance. This ensures a consistent and controlled handling of personal data within the DTG.

As the company grows, this list can be expanded to include new entities that also fall within the DTG. These future entities will also automatically fall under the central management system and the applicable information security policy.

Sub-processors

The sub-processors below are used for specific services or applications within this entity. They support, for example, with hosting, cloud storage or other specialized IT services. These sub-processors are carefully selected and contractually bound to the same security and privacy conditions as the entity itself, in line with the DTG's central information security policy.

Self-employed (ZZP) persons are not included as sub-processors in this list, because they are not applicable to all customers. However, a sub-processing agreement has been concluded for all hired self-employed persons who may have access to personal data. They are required to adhere to the same information security measures and privacy regulations that are stated in the management system. Contact your account manager for more information.
